

**Site Profiler® Version 1.1**  
**Release Date February 1, 2002**

## **New Features and Enhancements**

**Enhanced Risk Assessment Integration:** Site Profiler 1.1 allows you to integrate your vulnerability assessments as never before. Now your assessment issues are tied directly to the Assets, Threats and Risks that you identify in your assessments. This enables trends analysis, data mining and retrieval at a much more detailed level than before.

**Web Exporting:** Now you can export your asset, threat and risk analysis information to the HTML and corporate Intranet sites for reference by your entire organization, for knowledge management and crisis response applications.

**Simplified Hazard Creation:** Site Profiler 1.1 Planner and Assessor users can now create new threats, in addition to modifying threats from the threat library. This threat modeling capability gives the user increased ability to analyze hypothetical or emerging threats.

**Windows 2000 Execution:** Site Profiler 1.1 now runs on Windows 2000, in addition to Windows 98 and NT.

**Better Site File Management:** Site Profiler 1.1 now allows you to copy and delete site files in one simple step. Site Profiler 1.1's new copy feature allows you to perform rapid what-if analysis or special event planning.

**Report Generator:** Site Profiler's report generator was significantly enhanced to make it easier to create new report formats and simplify report writing within the tool.

**Look & Feel Enhancements:** Site Profiler 1.1 has new screen color and fonts used throughout the software to enhance readability and the aesthetic appeal.

**New Installer & Directory Structure:** Site Profiler 1.1's new installer was completely rebuilt to speed the installation process and now allows greater customization of installed features.

**Software Licensing:** Site Profiler 1.1's new licensing feature lets you control exactly who has access to solutions developed with Site Profiler 1.1. Date and feature locking are supported, allowing you to deliver only the features your clients need.

**More Robust Map & Model Importing:** Site Profiler 1.1 now fully integrates imported Profiler maps and imported models, eliminating file dependency issues present in previous versions.

**Stability & Performance Enhancements:** Site Profiler 1.1 is more stable and performs better than ever before. Interim Risk table results are now cached to speed your clients' analysis process. Numerous stability and performance improvements combine to amplify the speed with which your clients can complete their analyses.

*Site Profiler Now Supports Web Page Exporting*
