

Site Profiler® Version 1.6.5
Release Date January 17, 2003

New Features and Enhancements

Default Login Support: Site Profiler 1.6.5 includes the capability of logging the user in to your application at startup based on the inclusion of a command-line login ID and password.

Enhanced Plugin Interface: Developers using 1.6.5 can now access Bayesian attributes from their plugins through an improved Plugin Interface.

Better Control Over Interface Style: Site Profiler 1.6.5 now exposes the bullet image to developers, allowing for a custom image to be used to represent a bulleted list.

More Intuitive Backup/Restore Operations: The backup files produced by Site Profiler 1.6.5 now include more intuitive filenames for the backup and restore commands.

Enhanced Stability: Site Profiler 1.6.5 is more stable and reliable than ever, with numerous new fixes and performance enhancements.

- Cells selected in the review table no longer depress
- A problem that prevented multiple I/O data links in the review table has been fixed
- An object leak that originated from the scenario selector element has been eliminated
