

RISK ANALYSIS CENTER MOBILE APPLICATIONS: *RAC MOBILE MONITOR*

Digital Sandbox's **RAC Mobile Monitor** brings critical asset data directly to users 24/7, at any location, through Apple's® iPad™ and iPhone® devices. Leveraging the iPad and iPhone touch screen interface, the RAC Mobile Monitor makes key asset data and relevant threat information available at the touch of a finger. Built-in geo-positioning functionality enables users to gauge proximity of high-risk assets to possible threat events.

The RAC Mobile Monitor provides Digital Sandbox RAC subscribers with increased visibility into their high-risk assets during any situation.

RAC Mobile Monitor showing location of assets and asset details.

RAC Mobile Monitor – Key Components

Instant Access to Key Asset Data

RAC users can open an enhanced view of their asset data from any location. One-touch functionality enables users to quickly access a specialized subset of their asset information, including complete risk details, before drilling directly into the RAC's data pages.

Customized RSS Information Feeds

View real-time information on relevant threat intelligence via Digital Sandbox's RSS feed aggregating and prioritizing feature. Users can incorporate their own GeoRSS feeds, such as police calls for service or community news sources, into the data pool. The RAC Mobile Monitor plots locations of plausible threat situations; users can touch the threat indicator for details on the threat event itself.

Perform and Review Field Assessments

The RAC Mobile Monitor allows a user to perform and review asset field assessments. Photos and observations may be added using the iPhone's camera, automatically geo-tagging information with the device's location. Users can fully document asset vulnerabilities with photos and written descriptions while at the site.

Features

One-touch view of key asset details

Customizable threat monitoring and presentation

Real-time mapping functions

Benefits

A critical subset of asset information is displayed immediately upon touching the asset pin on the map (or through the Search function). View asset details, risk information, and perform field Assessments with photos and observations.

The RAC Mobile Monitor displays the location of relevant threat events that are generated by Digital Sandbox's Threat Monitor. Threat events that warrant concern appear geolocated on the home page and details on the event are displayed through a single touch.

Users can view assets within specific distances from the user's location. Assets are automatically displayed by geographic location upon opening the application.
