

RISK ANALYSIS CENTER STRATEGIC PLANNING: PROGRAM MANAGEMENT

Digital Sandbox's Risk Analysis Center 5 is the foundation for the kind of *Strategic Planning* activities that are requisite in announcing a comprehensive risk management program. The Risk Analysis Center (RAC) combines intelligent data collection and analytic tools with built-in monitoring and visualization features designed for in-depth *Program Management* activities. With the RAC, users can gain immediate insight into the progress of all the tasks involved with public safety risk management, no matter how widely dispersed resources may be.

Program Health Monitoring Console provides one-click access to program goals, objectives and activity alerts.

Program Management - Key Components

View Completeness of Data Collection Processes

Users can see the progress of their asset data collection processes, security/vulnerability assessments on assets, capability assessments, and status of threat intel items.

Current Calendar of Programmatic Events, Milestones, DHS Target Dates, Subscription Status, and Threat News Feeds

Know when the next data call and grant application dates are; review status of RAC subscription elements; view DHS announcements and press releases; monitor real-time threat notifications.

On-Demand Reports and Analysis

A wide selection of reports on assets, threats, risk, capabilities, and assessments – filtered by sector, jurisdictions, capabilities, audience – can be generated as needed.

On-demand performance management and analysis reports.

Features

Program Health Monitor is on RAC home page.

Data Management Summary Screens display task status, gaps in fulfillment, next steps.

Automatic report generation.

Benefits

Provides users with immediate feedback on asset data collection, program calendar, upcoming events, and current announcements.

Enables users to gain instant awareness of progress of data gathering and input tasks. Posts analyst-generated suggestions for programmatic next steps for each risk management category.

Every risk management category contains report templates that can be generated on demand. The reporting function automatically calculates and illustrates any configuration of applicable data, in multiple formats.
