**Digital Sandbox Appoints John W. Sturgeon II to Director of DHS Programs**

**September 1, 2008, McLean, Virginia** – Northern Virginia-based Digital Sandbox, Inc., the market leader in providing risk analytic tools and information products, today announced the promotion of John W. Sturgeon II to Director of DHS Programs, overseeing all the Company’s programs with the Department of Homeland Security. Mr. Sturgeon has supported the Department of Homeland Security as an analyst and consultant since 2004; he joined Digital Sandbox in 2006, primarily to support firm’s risk analysis work with the Grants Program Directorate at FEMA and the Homeland Infrastructure Threat and Risk Analysis Center (HITRAC). “As our work at DHS grows, John is the right choice to be the face of Digital Sandbox at the Department,” noted Anthony F. Beverina, the Company’s President. “He has the knowledge, experience, and relationships to ensure that the Company can continue to deliver the kind of high-quality analysis and risk management support the Department needs.”

Prior to his consulting career, Mr. Sturgeon worked for the FBI for 8 years, primarily in the field of intelligence operations. He holds a BS from the University of Maryland. “I am excited to synchronize our various efforts within the Department of Homeland Security and to further solidify Digital Sandbox’s footprint within the Department.”, Sturgeon said.

Digital Sandbox, Inc. provides analytic tools and information products to government agencies and large enterprises to enable them to optimize their strategic, policy, and budgetary decisions against the terrorism and natural hazard risks they face. Through the Company’s Risk Analysis Center (RAC), customers can use the Site Profiler® risk management software suite, authoritative data sources, and expert risk consulting, to manage their risks. Since 1988, Digital Sandbox’s analytic risk management solutions have helped customers in the National Security, Homeland Security, and Corporate Security fields to lower their risk exposure, increase their risk management budgets, and maximize their finite resources.
